IN BOSTON MARKETS.

Butter Prices Hold Firm in View of Small Receipts.

Boston, Dec. 16.—Butter continues rather quiet in the local market, but prices hold firm in the lack of large receipts. Very little fine fresh creamery butter is offered and storage goods are steadily working smaller. Cheese is in fairly good demand, and as supplies are moderate, prices are steadily maintained. Receipts of eggs are not large, but the supply is quite adequate for the demand, which just now is rather quiet, and the tone of the market is rather easy.

Quotations follow: Butter—Fancy northern creamery, tubs 36 1/2c, boxes prints 33 1/2c, western ash tubs 31 1/2c, fancy storage 31 1/2c, dairy 27 1/2c.

Cheese—York state twins, fancy 14 1/2c, fair to good 13 1/2c, Vermont twins, fancy 13 1/2c, fair to good 12 1/2c, 13c.

CARE OF EWES.

They Should Be Watched Through the Winter.

This is a good time to look after the breeding ewes. Do not allow them to be come poor and run down. A mistake of this kind will be very expensive before spring. During this time of the year when the grass is short they do not like to eat even the best of hay, and if not looked after they will become poor, says a writer in the Indiana Farmer. Pregnant ewes should be fed some grain at least once a day to insure strong, vigorous lambs later on. Many flock owners have the idea that their sheep can get along this time of the year without any grain, and without very much attention. It is true they will pick up enough to keep them alive and they will doubtless save some of their lambs, but in order to get the best results it will be necessary to get them in good condition now and keep them so until the lambs are here. I have known farmers to lose from 25 to 50 per cent of their lambs dropped. When asked the the lambs were so weak when they came that they could not get them up. This is a loss that is very important, for when a ewe loses her lamb or lambs, as the case may be, the greater part of her usefulness for that year is lost, and when we realize that much of it is unnecessary it becomes a question for serious consideration to every flock owner. Of course, it is impossible almost to save all of the lambs. Sometimes a ewe will fail to own her lamb and occasionally one of the little fellows will get hurt, and in very cold weather they may become chilled, but the improper nourishment of the ewes, for two or three months before lambing time. A weak, puny lamb, in case it does live cannot be expected to amount to very much. The best lambs are always those that as strong enough to look after themselves from the beginning.

So I say if you expect good results from your ewes later on, look after them now. Do not let them become poor and run down. It is not necessary to feed them like they were in the fattening pen, but feed and care for them reasonably, and your lambs will be strong and vigorous when they come and you will be well paid for your extra labor and expense. Sheep are great gleaners and during the summer may be able to pick up the greater part of their living, but the pregnant ewe must be looked after just the same as brood sow or the milk cow.
